

Jepp Menholt David

Web Developer and Designer

Work Experience

Apropos Bureau ApS

Jun '24 - Dec '25

At Apropos Bureau, I worked as a web developer, where I developed and maintained websites to ensure they are always functional and up to date. I worked daily with WordPress, Elementor Pro, and other site builders, and was also responsible for hosting and operating web hotels for the agency's many clients.

I have extensive experience writing code when a standard solution is not available. Here, I mainly worked with HTML, CSS, JavaScript, and PHP to develop tailored solutions. Additionally, I have built up knowledge over time about online advertising and an understanding of how websites and ads work together to create the best results.

Siite ApS

Oct '22 - Jun '24

I started at Siite as a student assistant during my studies, where I gained experience with WordPress, Elementor Pro, and developed a strong eye for UX/UI. After my studies, I continued as a full-time Web Developer Trainee, where I gained even more responsibility, including advising and supporting clients.

Alongside, I completed several UX/UI courses at the Interaction Design Foundation, which gave me a deeper understanding of how good design can elevate the digital experience.

About Me

I am an energetic and helpful colleague with plenty of drive and a strong desire to contribute to the social atmosphere at work. I thrive with responsibility, client contact, and delivering solutions that are modern, user-friendly, and efficient.

In my free time, I enjoy playing sports such as football, padel tennis, and golf. I also enjoy cooking and following Formula 1 on weekends. And I never say no to a cozy Friday-after-work beer with colleagues.

Education

UCN Aalborg - Sofiendalsvej

Multimediasign

Sep '21 - Juni '23

During my studies, I specialized in design and website development with a focus on UX/UI principles. I learned to work with code, including HTML, CSS, JavaScript, Vue, and PHP - as well as CMS solutions for WordPress. My final exam project was the development of a webshop for the wine importer Winefix.dk, which is still in operation and online today.
